That does help and provides some guidance for us in trimming down the previous H&S plan to make it more applicable to this project.

Dave: any follow-up or additional clarification we need that you can think of?

Thanks for your time Joyce.

Subject: Re: Third West Substation - Plans

I haven't gone back to look at the previous H&S Plan, but I doubt you need 100 pages for the new work. I've seen plans that include a lot of generic information about every conceivable situation (e.g., heat stress, cold stress, etc.) and so they are quite large.

I am interested in the specific hazards for workers on-site, and persons outside the site. Mostly you would address the asbestos hazards in the Plan with your proposed air monitoring, PPE, decon, fencing, etc., but I expect you would also include typical construction stuff like slip, trip, and fall, and of course electrocution because of the substation.

Does that help?

Thanks!

Subject: Third West Substation - Plans

Joyce,

As a reminder we are planning on sending you the required plans associated with the work to be conducted at Third West substation by the week of Feb 7th. We are working on the Work Plan, Health and Safety Plan and Sampling Plan.

We have some questions regarding the Health and Safety Plan.

We have the original Health and Safety Plan from the remediation activities that were conducted, which is rather robust and detailed (over 100 pages). The activities to take place associated with the proposed substation upgrade will involve significantly less disturbance of potentially contaminated soil than the previous project. Does the Health and Safety Plan need to be as detailed as the original? As I recall, in a previous conference call you mentioned that you anticipate this plan as being roughly a 15-20 page document. Could you provide some more direction on this regarding plan content and detail?

Can you clarify the purpose of the Health and Safety Plan in relation to this project so that we develop an adequate plan?

We look forward to your input on this so we may develop the plan in a timely manner.

Regards,
Brian King
